PROFESSIONAL SUMMARY

- Senior Software Engineer with around 6 years of experience building scalable enterprise platforms, AI-powered systems, and cloud-native microservices across Banking, Insurance, Telecommunications, Governance, Risk & Compliance domains. Experienced in architecting distributed systems using Java, Spring Boot, AWS, Node.js, and modern microservice architectures.
- Specialized in building AI-enabled enterprise solutions leveraging OpenAI GPT-4, Anthropic Claude, Meta Llama, AWS Bedrock, Groq, Codex, Kiro and multi-model orchestration platforms. Hands-on expertise in designing LLM-powered systems including Multi-Agent Architectures, RAG pipelines, Tool-Calling Agents, AI-driven workflow automation, conversational AI systems, and intelligent risk assessment platforms.
- Strong experience in designing scalable backend systems, event-driven workflows, cloud migration initiatives, enterprise governance platforms, and highly configurable workflow/template management ecosystems. Skilled in building modern frontend applications using Angular and React for enterprise-grade workflow, governance, and AI-driven platforms. Passionate about solving complex engineering challenges through AI-first product thinking and scalable software architecture.

EDUCATION

Sri Venkateswara College of Engineering

Bachelor of Technology in Computer Science and Engineering

Aug. 2016 – Sep 2020

EXPERIENCE

Software Engineer Professional

Jan 2025 - Present

British Telecom (BT Group)

Bengaluru, KA

- Architected and owned 3+ enterprise-grade Spring Boot microservices integrating 8+ GRC processes, reducing manual governance tracking effort by 60% and improving audit traceability across enterprise workflows.
- Designed and implemented a scalable Role-Based Access Control (RBAC) architecture supporting fine-grained authorization, dynamic role mapping, workflow-level access governance, audit visibility controls, and secure enterprise data segregation across multiple onboarded organizational processes.
- Designed and built an AI-powered Solution Impact Assessment platform using AWS Bedrock, OpenAI-based workflows, and conversational AI, automating HLD analysis, impacted-process identification, risk scoring, approval routing, and compliance assessment workflows significantly reducing manual governance effort.
- Engineered a highly configurable low-code workflow and template management platform supporting dynamic question banks, workflow builders, layout/theme customization, reusable component generation, and exportable NPM-based UI modules enabling enterprise-wide self-service process onboarding.
- Developed an AI-enabled enterprise collaboration and audit platform with conversational search, threaded discussions, workflow intelligence, tool-calling architecture, and enterprise audit tracking capabilities enabling users to retrieve governance data, workflow history, compliance insights, and operational traceability using natural language interactions.

Senior Software Engineer

Apr 2022 - Jan 2025

LTM (formerly LTIMindtree)

Bengaluru, KA

- Contributed to large-scale AWS cloud migration initiatives for Lincoln Financial Group (LFG) by modernizing legacy applications into scalable Spring Boot, Node.js, Lambda, and ECS-based microservices architectures.
- Developed and supported critical enterprise financial systems including AFP Query Service, Fund Modelling, RIA Onboarding, SSO Services, and Annuity platforms handling high-volume business workflows and financial operations.
- Improved platform reliability and engineering quality through automated testing, secure coding practices, SonarQube/Fortify compliance, and optimized database operations using DynamoDB and relational

databases.

Assistant System Engineer

Aug 2020 – Apr 2022

Tata Consultancy Services (TCS)

Bengaluru, KA

- Developed and maintained enterprise banking advisory applications for Bank Yahav supporting retail banking, securities, payment systems, and financial operations across multiple banking workflows.
- Implemented backend business logic, PL/SQL procedures, database optimizations, and production enhancements ensuring stable delivery of critical banking change requests and operational fixes.
- Strengthened application quality and production stability through secure coding practices, SonarQube/Fortify compliance, issue resolution, and frontend enhancements.

Software Engineer Intern

Feb 2020 – Jul 2020

EPIKINDIFI

Chennai, TN

- Built and supported fintech application features involving backend APIs, database operations, and frontend integrations while gaining hands-on experience in enterprise software development and SDLC practices.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- **Backend & Distributed Systems:** Spring Boot, Spring AI, Node.js, NestJS, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, Workflow Orchestration, Async Processing, RBAC System Design
- **AI & Agentic Systems:** OpenAI GPT-4o, Claude (Opus, Sonnet, Haiku), Llama 3.3, Groq, AWS Bedrock, Codex, Lang Chain, Lang Graph, RAG Pipelines, Hybrid Retrieval, Multi-Agent Systems, Tool Calling, MCP, Prompt Engineering, Amazon Q
- **Cloud, Databases & DevOps:** AWS (ECS, Lambda, API Gateway, Step Functions, S3, SNS, SQS, CloudWatch, IAM, DynamoDB, RDS), Docker, Kubernetes, PostgreSQL, Oracle SQL, pgvector, Pinecone, GitLab CI/CD, Grafana, Prometheus
- **Frontend & Developer Tools:** Angular, React, TypeScript, Tailwind CSS, GitHub, GitLab, Postman, Swagger, RAML, VS Code, Eclipse, IntelliJ IDEA, PGAdmin, Kiro

CERTIFICATIONS & AWARDS

- AWS Certified Cloud Practitioner
- AWS Cloud Technical Essentials
- Recognized with Problem Solver, Accountability, Super Crew, and SPOT ON A Team award for innovation, ownership, and delivery excellence.
